**Revenues in Capital-Scarce Economies** Christine J. Richmond, Irene Yackovlev, Ms. Susan S. Yang, 2013-06-12 Natural resource revenues are an increasingly important financing source for public investment in many developing economies Investing volatile resource revenues however may subject an economy to macroeconomic instability This paper applies to Angola the fiscal framework developed in Berg et al forthcoming that incorporates investment inefficiency and absorptive capacity constraints often encountered in developing countries The sustainable investing approach which combines a stable

fiscal regime with external savings can convert resource wealth to development gains while maintaining economic stability  
 Stochastic simulations demonstrate how the framework can be used to inform allocations between capital spending and  
 external savings when facing uncertain oil revenues An overly aggressive investment scaling up path could result in  
 insufficient fiscal buffers when faced with negative oil price shocks Consequently investment progress can be interrupted  
 driving up the capital depreciation rate undermining economic stability and lowering the growth benefits of public
