Webster University course ITM 5000 07 language English abstract: The Internet has brought the world closer than ever, especially with the ease in sharing information. A post online from Alpine, Texas can be accessible almost immediately by someone in Accra, Ghana, and at the same time with the person in Bangalore, India. As much as there is access to the Internet, authorized users can access information/data irrespective of their location. Business activities are now performed globally and efficiently in comfort; buyers and sellers do business without any constraints. Business supporting activities such as paying and receiving of cash, shipping of goods, and other related activities have now been automated in the cyberspace. The most reliable resource vault or knowledge center accessible by all is the Internet; it could even be referred to as one of mankind's greatest achievement. However, it has also made all users, including governments, corporate institutions, and business entities, exposed and vulnerable to numerous cyber crimes. The risk of losing personal data or theft of an important data like customer data from an organization by cyber criminals has become very high. Cyber security remains the biggest challenge faced by all, especially governments and organizations. Secrets of a Cyber Security Architect Brook S. E. Schoenfeld, 2019-12-06. Any organization with valuable data has been or will be attacked, probably successfully at some point and with some damage. And not all digitally connected organizations have at least some data that can be considered valuable. Cyber security is a big, messy, multivariate, multidimensional arena. It also explains how to surmount individual, team, and organizational resistance.
