[The Virtualization Cookbook for IBM Z Volume 2: Red Hat Enterprise Linux 8.2](#) Lydia Parziale,Murthy Garimella,Eric Marins,Filipe Miranda,Paul Novak,Vinodkumar Ramalingam,IBM Redbooks,2021-10-19 This IBM Redbooks publication is Volume 2 of a five volume series of books entitled The Virtualization Cookbook for IBM Z This volume includes the following chapters Chapter 1 Installing Red Hat Enterprise Linux on LNXADMIN on page 3 describes how to install and configure Red Hat Enterprise Linux onto the Linux Administration server which performs the cloning and other tasks Chapter 2 Automated Red Hat Enterprise Linux installations by using Kickstart on page 37 describes how to use Red Hat s kickstart tool to create Linux systems This tool is fundamentally different from cloning in that an automated installation is implemented You can try kickstart and cloning Understand that these applications attempt to accomplish the same goal of quickly getting Linux systems up and running and that you do not need to use both Chapter 3 Working with subscription manager yum and

DaNdiFied on page 47 describes how the Red Hat Network works. It provides centralized management and provisioning for multiple Red Hat Enterprise Linux systems. Kickstart is an easy and fast way to provision your Linux guests in any supported Linux platform. It re-creates the operating system from the beginning by using the kickstart profile configuration file that installs the new operating system unattended. It also sets up the new guest according to the definition that was set up in the kickstart file. Usually Linux is administered by the same team that manages Linux on all platforms. By using kickstart you can create a basic profile that can be used in all supported platforms and customize Linux profiles as needed. Cloning requires a better understanding of the z VM environment and z VM skills. It is a fast process if you enable the IBM FlashCopy feature in advance. It clones the disks from a golden image to new disks that are used by the new Linux guest. The process can be automated by using the cloning scripts that are supplied with this book. It is recommended that you start with *The Virtualization Cookbook for IBM Z Volume 1 IBM z VM 7.2 SG24-8147* of this series because the IBM z VM hypervisor is the foundation or base layer for installing Linux on IBM Z.

**The Virtualization Cookbook for IBM z Systems Volume 3: SUSE Linux Enterprise Server 12** Lydia Parziale, Berthold Gunreben, Filipe Miranda, Paul W. Novak, Ken Werner, IBM Redbooks, 2016-05-06. This IBM Redbooks publication is Volume 3 of a series of three books called *The Virtualization Cookbook for IBM z Systems*. The other two volumes are called *The Virtualization Cookbook for IBM z Systems Volume 1 IBM z VM 6.3 SG24-8147* and *The Virtualization Cookbook for IBM z Systems Volume 2 Red Hat Enterprise Linux 7.1 Servers SG24-8303*. It is suggested that you start with Volume 1 of this series because IBM z VM is the base layer when installing Linux on IBM z Systems™. Volume 1 starts with an introduction, describes planning, and then describes z VM installation into a two-node single system image (SSI) cluster, configuration, hardening, automation, and servicing. It adopts a cookbook format that provides a concise, repeatable set of procedures for installing and configuring z VM using the SSI clustering feature. Volumes 2 and 3 describe how to roll your own Linux virtual servers on z Systems hardware under z VM. The cookbook format continues with installing and customizing Linux. Volume 3 focuses on SUSE Linux Enterprise Server 12. It describes how to install and configure SUSE Linux Enterprise Server 12 onto the Linux administration system, which does the cloning and other tasks. It also explains how to use AutoYaST2, which enables you to automatically install Linux using a configuration file, and explains how to create and use appliances and bootable images from configuration files. In addition, it provides information about common tasks and tools available to service SUSE Linux Enterprise Server.
