Environmental Change Key Issues And Alternative Perspectives:

Environmental Change Frank Oldfield, 2005-08-25 *Environmental Change Key Issues and Alternative Approaches* describes and explains the significance of past and contemporary environmental and climatic change. It outlines the conceptual framework for studies of environmental change by posing key questions and presenting the results of relevant research. It provides a non-specialist introduction to models in environmental change research and to the study of past environmental changes. Covering the last 400 000 years, special emphasis is placed on past periods of rapid warming, the nature of climatic variability over the last 1000 years, and the dramatic and accelerating changes in the Earth system heralded by the industrial revolution. The book is extensively referenced and illustrated. This book provides a balanced non-specialist basis for understanding and exploring the scientific issues underlying global change for advanced undergraduates in geography, environmental, earth, biological, and ecological sciences.

Fundamentals of the Physical Environment

Peter Smithson, Ken Addison, Ken Atkinson, 2013-09-05 *Fundamentals of the Physical Environment* has established itself as a well-respected core introductory book for students of physical geography and the environmental sciences. Taking a systems approach, it demonstrates how the various factors operating at Earth's surface can and do interact, and how landscape can be used to decipher them. The nature of the earth, its atmosphere, and its oceans, the main processes of geomorphology, and key elements of ecosystems are also all explained. The final section on specific environments usefully sets in context the physical processes and human impacts. This fourth edition has been extensively revised to incorporate current thinking and knowledge and includes a new section on the history and study of physical geography, an updated and strengthened chapter on climate change, and a strengthened section on the work of the wind, a revised chapter 15 on cryosphere systems (glaciers, ice, and permafrost), a new chapter 23 on the principles of environmental reconstruction, a new joint chapter 24 on polar and alpine environments, a key new joint chapter 28 on current environmental change, and future environments. New material on the Earth System and cycling of carbon and nutrients, themed boxes highlighting processes, systems, applications, new developments, and human impacts, a support website at www.routledge.com/textbooks/9780415395168 with discussion and essay questions, chapter summaries, and extended case studies. Clearly written, well-structured, and with over 450 informative colour diagrams and 150 colour photographs, this text provides students with the necessary grounding in fundamental processes whilst linking these to their impact on human society and their application to the science of the environment.

Food Security and Global Environmental Change John Ingram, Polly Ericksen, Diana Liverman, 2012-07-26 *Global environmental change* GEC represents an immediate and unprecedented threat to the food security of hundreds of millions of people, especially those who depend on small-scale agriculture for their livelihoods. As this book shows, at the same time agriculture and related activities also contribute to GEC, for example, by intensifying greenhouse gas emissions and altering the land surface. Responses aimed at adapting to GEC may have negative consequences for food security, just as measures

taken to increase food security may exacerbate GEC The authors show that this complex and dynamic relationship between GEC and food security is also influenced by additional factors food systems are heavily influenced by socioeconomic conditions which in turn are affected by multiple processes such as macro level economic policies political conflicts and other important drivers The book provides a major accessible synthesis of the current state of knowledge and thinking on the relationships between GEC and food security Most other books addressing the subject concentrate on the links between climate change and agricultural production and do not extend to an analysis of the wider food system which underpins food security this book addresses the broader issues based on a novel food system concept and stressing the need for actions at a regional rather than just an international or local level It reviews new thinking which has emerged over the last decade analyses research methods for stakeholder engagement and for undertaking studies at the regional level and looks forward by reviewing a number of emerging hot topics in the food security GEC debate which help set new agendas for the research community at large Published with Earth System Science Partnership GECAFS and SCOPE

Biophilic and Bioclimatic Architecture Amjad Almusaed, 2010-12-21 Biophilic and Bioclimatic Architecture is a guide to innovative architectural design for architects engineers and other specialists who are working with biophilic and bioclimatic architectural concepts Biophilic and Bioclimatic Architecture has three parts Part I focuses on the relationship between architecture and human needs and the creation process demonstrating the meaning of architectural value in architectural hypothesis Part II opens the way towards a new understanding of biophilic architecture as a response to the negative actions of humans and the negative effects of using natural resources Part III shows the benefits of combining the effects of the climate with the notion of human comfort in bioclimatic architecture
